wirtschaftliche Zusammenarbeit
und Entwicklung

Infosure

Example 1:

InfoSure provides world-wide access to comparable and well structured information from existing health insurance systems. The tool is designed to provide both, qualitative and quantitative information including statistical data. In addition, it is capable to generate reports and templates of reports in order to facilitate the assessment and comparison of health insurance schemes. The system is available in three languages (English, French and Spanish). Taking all these different functions into account, *InfoSure* is regarded as a best practice model for consultancy services.

Numerous application examples of *InfoSure* are available. The examples can best be accessed directly from the *InfoSure* website. The presentation of the examples is only possible directly from the *InfoSure* website for technical reasons.
